

Conference Centre Composting, CESHI Collaboration a success !

CESHI Trial partners Warren House Conference Centre were so impressed with the composting technology supplied to them as part of a feasibility study, that on the conclusion of the trial, the machinery was purchased.

In 2007 CESHI (the Centre for Environmental Studies in the Hospitality Industry) commissioned Accelerated Compost to supply six machines to selected trial partners within the hospitality sector, the use of the machines to show how food wastes could be recycled on site through the use of in vessel technology.

Warren House accepted the machinery for trial purposes mid 2007, with the view of helping collate data and report on the feasibility of on site composting to CESHI at the culmination of the six month trial. On this conclusion the manufacturers Accelerated Compost offered the machinery for sale should it be found to be suitable, and indeed it was.

The A700 Rocket Composter pictured required minimal efforts to house, and the machine continues to serve the conference centre with an alternative to landfill, while producing a product that can be reused within the magnificent grounds and gardens.

Two other trial partners so far have also purchased the machinery, Gliffaes Country House Hotel and Regents College.
