

## **Young Offenders Waste Gets The Rocket Treatment - North East England Prison**

### **Composting Using Rocket In Vessel Composter**

HMYOI Deerbolt have had some fantastic success using their Rocket Composter in Barnard Castle County Durham, the recycling facility is overseen by Allan and Dean who are working with the inmates on a new government project in waste management which will see them leave with either an NVQ or similar accreditation after undertaking a 12 week course whilst at the Institute.

The inmates are presently involved in all aspects of the composting process from separation of waste, loading and monitoring and finally collection and sieving, the compost then being put into dedicated bays for final maturation.

The results of their efforts being very positive having produced some of the best compost we have ever seen
